**This document describes files posterior methane emissions for the US, 2010-2019. This is a simplified version. Will improve the readability upon the publication of this work.**

**Each file is an inversion result, using different inversion parameter (different regularization parameter, prior error estimate, etc.).**

**The .sav data includes the following variables:**

**grid\_scalor\_all:** Inversion derived posterior scaling factor for gridded methane.

**grid\_scalor\_sectors1:** Posterior scaling factor for difference emission sector, based on Method 1.

**grid\_scalor\_sectors2:** Posterior scaling factor for difference emission sector, based on Method 2.

**Regionname:** Name of oil/gas production regions

**Varname:** Name of different emission sector

**Regiontotalemis:** Regional total annual emission for different regions and sectors

**Regioncountry:** Country of each region.
